Financial Services

DISRUPT THE STATUS QUO

IN THE FINANCE SECTOR, the CFO and his team are pressured to provide key figures that give deeper insight and more strategic direction into the business than ever before. With budgets and resources that remain constrained, it is a challenge to find time, leverage talent, and share information in the most efficient, productive way possible.

Finance is required to deliver key figures that show the company's market position as well as profitability and liquidity. This is only possible if the core processes of accounts payable and accounts receivable are secure and accurate.

Often, outdated, siloed paper and manual operations mean costs are recorded too late, approvals take too long, information must be pieced together from disconnected sources, and bookings can't be completed.

AYOH offers a comprehensive, integrated document management solution, that takes into account the actual business processes in various departments, and addresses their unique challenges.

1. AYOH can streamline and manage a combination of desktop and centralised multifunctional printers, their connectivity, technical service, and consumables requirements, increasing productivity and reducing print costs by up to 40%.
2. AYOH can provide DaaS (Device as a Service) so that employees are connected and mobile, without the burden of supporting, securing and managing multi-OS devices.
3. AYOH offers end-point security for PCs and printers, ensuring that information sharing is compliant, access-controlled, encrypted and secure.
4. Tying all of this together is a solution that integrates all of this valuable document and process knowledge in one system, directly with your ERP for a truly complete information picture.

PRINT MANAGEMENT

CHALLENGE

Unmanaged, high-cost, desktop printers that are not on the network, complex consumables ordering for different devices, and an overburdened IT department required to troubleshoot multiple brands of printers.

SOLUTION

On an SLA, streamline and manage a combination of desktop and centralised multifunctional printers, their connectivity, technical service, and consumables requirements, increasing productivity and reducing print costs by up to 40%.

3-STEP PROCESS TO COST-EFFECTIVE PRINT MANAGEMENT

STEP 1

Understand and get control of your current print environment.
You can't improve an environment out of your control. An assessment of your paper-based and digital document processes gives you a starting point.

STEP 2

Optimise and improve your print fleet.
To move towards a paperless environment, you first need to improve your current business processes, which has a bonus of saving costs, improving productivity and freeing up resources.

Along with your networked printer, connect your desktop printers to the network and put them on an SLA, a service also known as Desktop MPS.

STEP 3

Digitise and streamline workflow processes.
When documents move smoothly through your business, easily created, archived and accessed by your employees, wherever they may be, you can start automating and digitising the processes

DESKTOP MPS SERVICES
Desktop fleet refreshment, networking and management

All-inclusive, managed HP SLA

Proactive automated billing and technical service

Includes genuine HP parts and supplies

Managed consumables stocking

DaaS: DEVICE-AS-A-SERVICE

CHALLENGE

Employee productivity and IT efficiency are affected by supporting, securing and managing multi-OS devices, compounded by complex purchasing, scaling, and inflexiblity challenges.

SOLUTION

DaaS (Device as a Service) keeps employees connected and mobile with a flexible, scalable device and accessory mix, reducing the burden of supporting, securing and managing multi-OS devices, thereby optimising IT assets and resources.

WHAT IS DEVICE-AS-A-SERVICE?

DaaS combines hardware leasing and end-to-end lifecycle services into a single, per-device, monthly contract. It includes full asset management, managed services, and a range of technology refresh options, with the ability to scale the number of devices up or down to meet the demands of the business, and refresh technology over time and based on employees' requirements.

END-TO-END LIFECYCLE SERVICES

DISCOVER AND DESIGN
Create your ideal tech environment with our assessment, design, and planning services.

CONFIGURE
Save time and increase productivity by having your custom images and settings installed.

DEPLOY
Hit the ground running by letting HP handle everything from logistics to installation to data migration.

DISPOSE AND REFRESH
Keep your technology current by letting HP securely and responsibly manage hardware that's at the end of its life-cycle and then deliver new equipment to your users.

MAINTAIN
Relieve your IT staff of maintenance hassles by letting HP handle onsite service, accidental damage protection, and more.

OPTIMISE
Get the most out of your IT environment through helpdesk services, priority support, and staff augmentation.

AYOH DaaS SERVICES

A wide variety of device choices

Technical support and rapid repair or replace

Actionable analytics, proactive management capabilities

Flexible plans with a simple price-per-device model

Lifecycle management on a global scale

END-POINT SECURITY

CHALLENGE

Firewalls are no longer enough to protect data. Businesses now require multiple layers of protection down to every network endpoint on PCs and printers, to be secure and compliant. This includes employee access to the network.

SOLUTION

End-point security for PCs and printers, ensuring that information sharing is compliant, encrypted and secure. A privileged access management solution that controls employee access to information and data.

Business networks have become amorphous, a tangle of devices both business and personal, accessing data through multiple WiFi nodes both onsite and off.

3-STEP PROCESS FOR SECURE AND COMPLIANT END-POINTS

STEP 1
Prepare for compliance audits

To prepare for a compliance audit, IT teams should effectively monitor their entire IT infrastructure including endpoint devices like PCs and printers. They should also schedule regular assessments to keep every endpoint device, including the entire printer fleet compliant.

STEP 2
Carry out a complete audit

IT teams must identify every device that can access their company and customer data and assess the level of security it has built in and use a fleet security management tool that can immediately identify new devices and automatically apply corporate security policy settings.

STEP 3
Embrace security by design

Put the right IT policies in place so that compliance requirements are not an afterthought but an intrinsic way that new devices and services are introduced into the network. Monitor every device including your printers and feed anomalies or incident information into your network-wide vulnerability assessment and monitoring tools.

Although external security attacks are more prevalent, insider vulnerabilities are costlier: negligent employees ignoring security protocols and unsecured devices connecting to the network.

The endpoint is the weakest node in any network, and with the increase in BYOD, remote working and Internet of Things, the endpoints, and therefore hacking opportunities, are multiplying.

Privileged Access Management

Traditional enterprise security tools are complex Controls give you the agility to defend against cyber threats. Simply access, configure and manage your privileged access management solution on your own terms, without sacrificing functionality.

Secret Server

PRIVILEGED ACCESS MANAGEMENT

Enterprise-grade password security and privileged access management for organisations of all sizes and any type of deployment.

Privilege Manager

LEAST PRIVILEGE & APPLICATION CONTROL

All-in-one solution including threat intelligence, application whitelisting, greylisting, and blacklisting, with no impact on productivity.

Behavior Analytics

PRIVILEGED ACCOUNT INCIDENT RESPONSE

Advanced analytics and machine learning automatically identify and analyse suspicious behavior. Real-time alerts support rapid, incident response.

DOCUMENT MANAGEMENT

CHALLENGE

Inefficient document storage and management cost businesses in time searching for lost documents, money and non-compliance. This also results in late cost recording, delayed approvals disconnected information sources, and incomplete bookings.

SOLUTION

Integrate valuable document and process knowledge in one system, directly with the ERP for a truly complete information picture. Drastically reduce document search time, space requirements, qualify for early payment discounts, and speed up accounts receivable collections.

ACCOUNTS PAYABLE:
quickly record and book costs

ACCOUNTS RECEIVABLE:
speed up collections

FINANCIAL AUDITS:
score points with perfect organization

Meet compliance mandates

Integrate with your ERP

Recover quickly from disaster

Maintain complete control

Move to the cloud

Securely archive business documents of all types, making them available in a flexible way, and using them efficiently. Automate business processes and workflows by managing and linking documents electronically. Every employee with the necessary authorisation has access to all information needed for their work. All interrelated documents concerning a customer, a project, or a business process are available within a few seconds.

HOW DOES IT WORK?

Content capture and ingestion

STEP 1: GET THE DOCUMENTS INTO THE SYSTEM

- Email
- PDFs
- Office Documents
- Scanned Documents
- Mobile Capture
- eForms

STEP 2: INTELLIGENTLY PROCESS DOCUMENTS

Process automation
Exception handling
Document classification
Rules-based routing
Mobile workflow

Data enrichment
Image editing
Intelligent indexing

Process intelligence and workflow

Content view and decision making

STEP 3: REVIEW AND OPTIMISE

- Integration
- Search
- Browsers / Web portals
- Reports
- Mobile Apps
- Sharing
